## MINING AND OIL NEWS. ARIZONA COPPER PRODUCTION LARGE

Many Changes in the Clifton-Morenci Mining District—Cochise Mine Good.

Clifton, Ariz., July 27.—The New York and Arizona company reports that the stamp mill for its property has been shipped from Los Angeles.

The grade has been completed at the mill site, and the foundation is being laid. The pipe line for water supply has been completed for some time and the supply will be ample for mill purposes.

Davis & Shaw have taken a contract for driving the Lillian tunnel to intersect the Buzzard Shadow vein, from which some very rich ore has been taken from the surface.

Ed Blacketer is taking ore from the Thompson drift on a lease, and has now over 100 tons of milling ore ready for the new mill.

E. H. Beauchamp has resigned his position as assayer with the Lamar Assaying and Engineering company and leaves for the Gold Belt mines, where he will superintend the trial run at the mill with the electro-chemical tests.

It is reported officially that in the northern portion of the Shannon Copper mine, 20 feet below what is known as the Boulder tunnel, 20 feet of high grade smelting ore has been encountered.

At the present time the smelting ore averages about four and three-quarters per cent copper, and the concentrating ore averages about two and three-quarters per cent. These figures are both a little higher than the average last year.

The June 1910 production of the Arizona Copper company was 2,500,000 pounds of copper. The following is the monthly output for the past nine months, which shows a uniformity of monthly yield:

June, 1910.	2,500,000
May, 1910.	2,610,000
April, 1910.	2,340,000
March, 1910.	2,330,000
February, 1910.	2,430,000
January, 1910.	2,630,000
December, 1909.	2,600,000
November, 1909.	2,614,000
October, 1909.	2,502,000

Nine months' total. 23,550,000

Cochise, Ariz., July 27.—The gold property of the Morris Bros., near here, is looking better all the time. The main shaft is down 100 feet and from the 100 foot level a drift has been run 70 feet, practically all in ore, as it all pans some values in gold. Two tunnels have also been run on the vein which the assay prove runs from \$2 to \$10 per ton. The owners are very much encouraged and are confident that they are opening up a big gold mine.

## KINGMAN MINE SOLD TO NEW COMPANY

Report That \$90,000 Was Paid for Ruth-Rattan Claims—Other Mining News.

From Kingman, Arizona, comes word that a new company called the Ruth-Rattan mining and milling company has purchased the Ruth and Rattan mining claims in the San Francisco mining district west of Silver creek. The price is said to be \$90,000.

These properties are considered the finest free milling gold and silver properties in Mohave county. On the Rattan mine is a shaft 200 feet deep on a vein two to three feet wide averaging \$20 gold per ton. The Ruth vein is a true fissure in quartz and selenite. This vein averages four feet in width and from samplings is found to average from \$25 to \$26 per ton. There is a shaft on this vein 100 feet deep and about 100 feet of work has been done on the 100 level.

The new company, under the presidency of Eli Hilly, will move its present 10-stamp mill up from the Colorado river to the mine, and when a complete cyanide plant is installed will use the water from the mine for treatment purposes. The Desert Light & Power company will furnish power for the new plant, and the line is now being extended to within three miles of the mines.

## BULLION SHIPPED.

Wickenburg, Ariz., July 27.—The bank of Arizona has received a bar of gold bullion from the Mount Elliot Consolidated mines at Chapparel, of the value of \$2,250, and in addition to that output there are concentrates at the mine of the value of \$4,000 ready for shipment to the Humboldt smelter. This output is for the month of June and the early part of July.

The new five-drill air compressor that is to be electrically driven, has arrived and is installed. With this appliance all mining in the future will be conducted at the five points on the system, which gives some idea of the magnitude of operation.

In the 200 foot level of the Ticonderoga, a strong shoot of good ore has been cut in. The mill is running steadily on full shift and the mine is yielding an abundance of ore. Steam power will be discarded and hereafter the surface and underground work will be propelled entirely by electrical power.

Mohave County Mines.

The work of grading for the mill site on the Tragedy mine of the Frisco M. & P. company, in Mohave county, Ariz., has started at the five points on the machinery for the 100-ton mill. The Home Pasture mine, in Mineral Park, Ariz., shipped another car of ore on July 23, running \$75 a ton. This makes the sixth shipment that the owners have made, ranging in value from \$54 to \$200 per ton. The mine is attracting great attention in mining circles and as a result some Chicago parties took an option on it last year.

In the C. O. D. mine in Mohave county a new strike of high grade ore was made last week running \$200 per ton.

## NATIVE COPPER IN A HILLSBORO MINE

Some Rich Ore Reported in Properties in Camp Near That Place.

From Hillsboro, N. M., comes the report of a strike of rich copper ore, carrying mainly native copper in altered schists. This was made on the 80 foot level at a point 120 feet under the surface. A drift has been run through this body of ore a distance of 30 feet. The owners of the property are the Hillsboro Bros., who have been developing this property for several years. It is located nearly in the center of Copper Flat. The owners are also sinking in a shaft on the Black Peak. The shaft is down 75 feet and indications of copper in the form of chrysocolla have been encountered and it is believed that good copper ore will be encountered lower down. The entire formation of Black Peak is similar to that where the present discovery was made.

## Manganese Ores.

J. G. McPherson and Dr. G. V. Copp have found a large body of manganese ore in the lime hills east of Hillsboro. They have cross-cut the ledge a distance of 30 feet. The outcrop has been traced along the surface over 500 feet. The ore is pyrolusite, an oxide of manganese free from sulphur and phosphorus, carrying 63.3 per cent manganese. Below the lime capped surface the ore is said to be very pure. Manganese ore is worth from \$10 to \$12 per ton.

## MEXICAN WEST COAST MINE HAS NEW CYANIDE PLANT

The Yoyufo Development company has just completed a satisfactory 30 days run of its new cyanide plant, and the plant is temporarily shut down to permit of needed changes of minor nature. Meantime, regular shipments of high-grade ore and concentrates are being made, a recent car lot returning over \$40,000. The mines are at Yoyufo, Rayon district, in the southwestern part of the state of Chihuahua, Mex., about 20 miles northwest of Bocoyna, a station on the Orient railroad.

## NEW PROCESS TO TREAT ORES IN SAHUARIPA DISTRICT

The Mesa Rica Gold Mining company of Milwaukee, Wis., has ordered a plant of the Inlay process of rapid cyanidation for its properties in the Sahuaripa district, 30 miles southeast of Moctezuma, Sonora.

Stamps will be used for crushing. The company owns the Lluvia de Oro and Milwaukee mines in the same district.

## NEW MILL IN URES DISTRICT.

At La Palma mine in the Ures district, Sonora, a four-stamp 30 ton mill has been erected and is in operation. A large force of men is taking out the gold-silver ore which constitutes the product of the mine. In the same district.

## S.S.S. REMOVES ALL HUMORS FROM THE BLOOD

The cause of all skin diseases can be traced to some humor in the blood. Healthy cuticles are only possible where the circulation is pure; and therefore the cure of any skin trouble can only come from a thorough cleansing of this vital fluid. Salves, washes, lotions, etc., cannot cure. True, such treatment relieves some of the itching and discomfort, helps to reduce inflammation, and aids in keeping the affected parts clean, but it does not reach the blood, where the real cause is located, and as best can only be palliating and soothing. S. S. S. cures skin diseases of every character and kind, because it purifies the blood. It goes into the circulation and removes the humors that are causing the trouble, builds up weak, acid blood, and completely cures Eczema, Acne, Tetter, Salt Rheum, Poison Oak, and every other variety of skin affliction. When S. S. S. has driven the humors from the blood, and purified the acid-heated circulation, every symptom passes away, the cuticle is again nourished with rich, healthful blood, and comfort is given to disease-tortured skins. Book on Skin Diseases and any medical advice free to all who write. THE SWIFT SPECIFIC CO., ATLANTA, GA.

## PENNSYLVANIA LINES

When Starting for New York

ask for Pennsylvania Lines tickets. They may be purchased at offices of Western railroads selling tickets through St. Louis.

Fast through trains, Six from St. Louis, to New York every day, form convenient connections with those from the West and Southwest. All are complete in travel comforts—nothing overlooked, nothing commonplace. You will enjoy riding on any of them.

## New York Trains Leave St. Louis

trict a large mill is being erected at the San Geronimo mine, which is said to be working 150 men.

## SONORA SMELTER PLANNED.

W. B. Duval, general manager of the West Coast Smelting and Refining company, states that the erection of the proposed smelter and concentrator will be undertaken after the close of the rainy season in the fall. A 100-ton concentrator is to be built in units of 200 tons each; also a 300-ton smelter. The properties are 40 miles west of Carbo station on the Sonora railway.

## ROTHSCHILD SCOUTS IN SONORA

Douglas, Ariz., July 27.—Engineers Wilkinson and Powers, who recently examined properties for baron Rothschild in the vicinity of Tepic, south of the Yaqui river, have just left Douglas after having made an examination of the Antigua mine and other properties in the well known Tabataachi district, located southeast of the Tigre district in northern Sonora. The engineers came here from London.

## DEVELOPING SONORA MINE.

The General Development company, a Lewisham concern, is extensively developing properties in the Yaqui river region, Sonora, Mexico, formerly included within the boundaries of the Rayall exploration concession. The properties were opened up by the Pacific Smelting & Refining company and a few months ago were bonded by the General Development company.
